SCOTT LOZANO

Security & Full Stack Engineer

Coimbra, Portugal | +351 911 085 926 | scottloz@protonmail.com | scottech.software | github.com/AngelLozan | linkedin.com/in/angel-lozans

SUMMARY

Full stack and security engineer. Started in crypto customer support, won the company's first hackathon with a tool I coded, and grew that into building production Trust & Safety and security systems at Exodus, then full stack product work at ARTSVP. I turn manual, repetitive processes into reliable systems across Ruby on Rails, Node/React, Go and Kubernetes.

EXPERIENCE

Security Engineer · Exodus Movement Inc. 06/2021 - 02/2024

- **From support to security:** joined in Technical Support, then led and won Exodus's first hackathon with a React Chrome extension that verifies crypto wallet addresses against a database. Still used by a 100+ person department, it brought response time under **10 minutes** and, with Web3 and Rails coursework, led to my move into Security Engineering.
- Built **Scam Hitlist** (React/Node/Postgres), taking brand protection from spreadsheets to a Trust & Safety platform with bulk reporting, evidence management, automated monitoring and a read-only MCP interface; personally reported **200+ malicious sites in one week**.
- Led and coordinated the ChainPatrol rollout (vendor, Legal, Slack/API). The program handled **9,590 reports, 6,094 takedowns completed, 2.26-day median takedown**.
- Automated Support security checks in Intercom: OPSWAT file scans cut turnaround from hours to **1-2 minutes** and escalate only genuine threats to SecOps; HIBP checks reached **92.6%** of eligible scam tickets; Safe Report parsing has processed **950** conversations.
- Built the Address Intelligence repository: **3,086 addresses, $10.6M in reported losses**, surfacing **202 repeat addresses** for investigation and shared automatically with Hypernative, ChainPatrol and BlockAid.
- Built an EIP-7702 delegation checker (**11 networks**) replacing a manual GPT process, plus Hypernative on-chain monitoring and Slack incident-response bots (**127 agents** in one rollout).
- Containerized and deployed a Rails/JS app to AWS EKS, **cutting threats to users 50%**; Puppeteer automation cut manual regression testing **20%**; a Kubernetes Discord bot lifted community engagement **20%**.

Full Stack Engineer · ARTSVP *(art-world event and booking platform)* 07/2024 - Present

- Full stack development in Rails, JavaScript, Hotwire and Sidekiq on a multi-tenant SaaS: database optimization, DevOps on Heroku, code review, monitoring (Honeybadger) and bug fixes. Lead of the Infrastructure & Optimisation project.
- **Performance:** cut a timing-out invites query from **15.1s to 85ms** with a covering index, proven with EXPLAIN on production data before and after deploy.
- **Security:** secops review and auditing, preventing multiple live threats including a supply chain attack; closed an auth bypass via query params.
- **Trust & Safety:** built a scheduled organisation-restriction reviewer that auto-trusts, holds or flags new signups (rules calibrated on 23 restricted orgs), with Discord alerts.
- **Product:** rolled out the Tailwind v2 admin UI behind an org-level switch; built async email validation for invites; fixed partner-portal duplicate organisations and guest-list attribution with backfill scripts; reviewed Stripe overage invoicing.
- **AI support:** replaced Crisp with a Chatbase agent grounded in the product docs, with signed-in user identity.

Backend Engineer · Emma Sleep Company 02/2024 - 07/2024

- Maintained Go microservices and Java SaaS components for e-commerce; shipped TypeScript front-end features.

Freelance Software Developer · Scott Tech 10/2021 - Present

- Launched a Rails/JS e-commerce site with NFT and dApp features for an artist, **raising their profit margin 20%**; shipped a Polygon/Solana NFT site (Solidity, Vue, IPFS, ERC721) with all smart contracts.
- Hobby projects (homelab, Telegram and AI bots, Rails tools) are viewable at **scottech.software**.

SKILLS

Languages	Ruby, JavaScript, TypeScript, Go, Java, Solidity, SQL
Frameworks	Rails, Node.js, React, Next.js, Vue, Hotwire/Stimulus, Tailwind, Sidekiq, GraphQL, REST APIs, Puppeteer, Discord.js, Postman
Infra & Data	AWS (EKS), Kubernetes, ArgoCD, Docker, Heroku, Digital Ocean, Terraform, PostgreSQL, Redis, GitHub Actions CI/CD, Linux
Security	Threat detection and takedowns, incident response, secrets and network policies, Splunk, Wiz, Hypernative, Honeybadger, Grafana, Sumo Logic
Web3 & AI	Ethers.js, Web3.js, Hardhat, Truffle, IPFS, EVM/Solana/Bitcoin; MCP servers, grounded LLM tooling, Ollama
Homelab	Raspberry Pi, Pi-hole, Unbound, Tailscale, Telegram bots, Google Sheets API; Asana, TestRail

EDUCATION

Le Wagon, Web Development 2023
Consensys Academy, Blockchain Developer 2022
Univ. of Washington, BA Communications 2009 - 2012

LANGUAGES

English (native), Portuguese (conversational/working)
